CE
Conforming to
EMC Directive

FDA
Conforming to
FDA regulations
(HL-T□F only)

This product is classified as a Class 1 Laser Product in IEC / JIS standards and a Class II Laser Product in FDA regulations. Do not look at the laser beam through optical system such as a lens.

Ultra-compact sensor head A high-functionality intelligent controller

Ultra-compact sensor head

The ultra-compact size and yet the high level of performance. These sensors save space.

Resolution of 4 μ m 0.157 mil

A high resolution of 4 μ m 0.157 mil (at an average 64 cycles) allows high-precision positioning and size judgment.

Distinguishing size of electronic components

Long sensing range

Long sensing range of 500 mm 19.685 in [HL-T1005A(F), HL-T1010A(F)] and 2 m 6.562 ft [HL-T1001A(F)] are available.

APPLICATIONS

Checking the positioning of chip components

Detecting defective lead frame seating

Sensing wafer position in wafer cassette

BASIC PERFORMANCE

High-precision judgment even from minute differences in light intensity

The sensors are sensitive to minute differences in light intensity, so that they can judge even the opacity of glass and turbidity of liquids. In addition, the amount of light received can be displayed as a percentage to allow you to determine permeation rates.

Distinguishing opacity of glass

Minimum sensing object diameter $\phi 8 \mu\text{m}$ $\phi 0.315 \text{ mil}$

HL-T1001A(F)

The laser with a beam diameter of $\phi 1 \text{ mm}$ $\phi 0.039 \text{ in}$ can sense extremely small objects with dimensions in micrometers such as bonding wires.

Adoption of a Class 1 laser

The adoption of a Class 1 laser (IEC / JIS) eliminates the need for safety countermeasures, so that these sensors can be used in photo-electric sensor applications with confidence.

FUNCTIONS

Fully equipped with convenient functionality

A wide range of convenient features has been incorporated into the unit's compact body: standard received light setting / auto scaling setting / measurement processing (various timer and hold functions) / differentiation / monitor focus function. These features make the unit useful for a wide variety of applications.

3 types of teaching functions are now available

3 types of teaching functions are available: positioning teaching / 2-level teaching / automatic teaching, thus enabling a variety of applications to be accommodated for many different types of production sites.

Positioning teaching	The actual value measured at the time when teaching is performed is utilized as the threshold value. Best suited for high-precision positioning.
2-level teaching	In this teaching method, an intermediate level between the first and the second teaching levels is utilized as the threshold value. Minute differences, such as changes as small as the thickness of a sheet of paper between the sensing objects, can be detected when this teaching method is utilized.
Automatic teaching	With this teaching method, a series of periodic arbitrarily measurements are taken automatically and an intermediate value, between the maximum and minimum values obtained by this measurement, is utilized as the threshold value. The threshold value is therefore set in relation to the sensing object. Best suited for applications in which teaching must be performed without stopping the current flow of operations.

Detection resolution can be easily confirmed

The current resolution can be easily confirmed by setting the controller to indicate resolution display mode. By displaying the resolution, the marginal increment can be easily determined for the threshold value setting, helping to accurately determine whether sensing can be performed.

FUNCTIONS

Analog output is switchable between current / voltage

The analog output can be switched between either of two different outputs; current (4 to 20 mA) / voltage (± 4 V). With the monitor focus function, the output can be adjusted over the range from -5 V to $+5$ V, or from 0 V to $+5$ V, facilitating connectivity with a variety of output devices.

Monitor focus function

The linear output is fully adjustable over the following range (current: 4 to 20 mA / voltage: ± 4 V). The usage of the monitor focus function together with selectable current / voltage switching for the linear output allows for compatibility with a variety of output devices.

The linear output must be set by determining output values (maximum; current: 0 to 23.5 mA / voltage: ± 5.5 V) at two different points, for the arbitrary display value.

MAINTENANCE

Self-check for laser diode deterioration

The intelligent controller performs self-checking for laser diode deterioration. If the controller detects significant deterioration (end of diode life), an error will be displayed on the main digital display panel. This function enables users to prepare in advance for potential laser diode malfunctions.

VARIETIES

FDA regulations conforming types are available

FDA regulations conforming types, most suitable for equipment used in the USA, are now available.

FDA : Class II
IEC / JIS : Class 1

OPERABILITY

Superior operability has been achieved

All settings can be easily performed by using the four-way keys and viewing the digital displays.

Large dual digital display

After power up, the measured value (red) and the threshold value (yellow) are displayed (letter height 7 mm 0.276 in)

Judgment output indicators

HIGH (Orange) / PASS (Green) / LOW (Yellow) 3-color display

Easy operation with four-way keys

OPTIONS

Calculations for 2 sensors are possible

The calculation unit (optional) just needs to be connected between the two controllers to enable calculations (addition and subtraction) to be carried out for two sensors. No digital panel controller is needed either.

Sheet width measurement

SPECIFICATIONS

Controllers

Type		NPN output		PNP output		
Item	Model No.	HL-AC1		HL-AC1P		
Applicable sensor head		HL-T1001A/T1001F, HL-T1005A/T1005F, HL-T1010A/T1010F				
Supply voltage / Current consumption		12 to 24 V DC $\pm$ 10 % Ripple P-P 10 % or less / 190 mA or less (when connected to the sensor head)				
Measuring cycle		150 μ s				
Linear output		Current / voltage output switchable (Note 2) • During current output: 4 to 20 mA/F.S., Maximum load resistance: 300 Ω • During voltage output: $\pm$ 4 V/F.S., Output impedance 100 Ω (In the monitor focus function, it can also be set at $\pm$ 5 V, 0 to 5 V, etc.)				
Temperature characteristics		$\pm$ 0.2 % F.S./ $^{\circ}$ C (Note 3)				
Settable average sampling rate (Note 4)		1 / 2 / 4 / 8 / 16 / 32 / 64 / 128 / 256 / 512 / 1,024 / 2,048 / 4,096				
Judgment outputs (HIGH, PASS, LOW)		NPN open-collector transistor • Maximum sink current: 50 mA • Applied voltage: 30 V DC or less (between judgment output and 0 V) • Residual voltage: 1.2 V or less (at 50 mA sink current)		PNP open-collector transistor • Maximum source current: 50 mA • Applied voltage: 30 V DC or less (between judgment output and +V) • Residual voltage: 2 V or less (at 50 mA source current)		
Utilization category		DC-12 or DC-13				
Number of outputs		HIGH / PASS / LOW 3 values output				
Output operation		HIGH: ON when measured value > HIGH threshold value PASS: ON when HIGH threshold value $\geq$ measured value $\geq$ LOW threshold value LOW: ON when LOW threshold value > measured value				
Short-circuit protection		Incorporated				
Laser OFF input		0 V connection: Laser emission halt Open: Laser emission • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		+V connection: Laser emission halt Open: Laser emission • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		
Zero reset input		0 V connection: Zero reset operates Open: Zero reset ineffective • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		+V connection: Zero reset operates Open: Zero reset ineffective • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		
Timing input		0 V connection: Effective Open: Ineffective • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		+V connection: Effective Open: Ineffective • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		
Reset input		0 V connection: Effective Open: Ineffective • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		+V connection: Effective Open: Ineffective • Applied voltage: 30 V DC or less (leak current: 0.1 mA or less)		
Indicators	Laser emitting (LD ON)	Green LED (lights up during laser emission)				
	Judgment outputs	HIGH: Orange LED (lights up when measured value > HIGH threshold value) PASS: Green LED (lights up when HIGH threshold value $\geq$ measured value $\geq$ LOW threshold value) LOW: Yellow LED (lights up when LOW threshold value > measured value)				
	Enable (ENABLE)	Green LED (lights up during normal operation)				
	Zero reset (ZERO)	Green LED (lights up when the zero reset function is enabled)				
Main digital display		5 digit red LED display $\left[\begin{array}{l} \text{RUN mode: Either the measured value (mm) or the hold value will be displayed.} \\ \text{Reverse mode: The display orientation will be reversed.} \end{array} \right]$				
Sub-digital display		5 digit yellow LED display $\left[\begin{array}{l} \text{RUN mode: Either the resolution or laser beam reception amount will be displayed.} \\ \text{THR mode: The threshold value will be displayed., Reverse mode: The display orientation will be reversed.} \end{array} \right]$				
Main functions		- Measured value display - Setting value, light amount value resolution display - Standard received light setting - Automatic scaling - Scaling	- Display reverse - ECO display - Display digits limitation - Sample hold - Peak hold - Bottom hold - Peak to peak hold - Self peak hold - Self bottom hold	- Zero reset - Initial reset - ON-delay timer - OFF-delay timer - ONE SHOT timer - Differentiation - Sensitivity selection - Threshold value direct setting	- Positioning teaching 2-level teaching - Automatic teaching - Hysteresis width variability - Monitor focus - Non-measuring time setting (A-B) calculation (Note 5)	(A + B) calculation (Note 5) - Mutual interference prevention (Note 5) - Laser deterioration detection - Key lock - Zero reset memory
Environmental resistance	Pollution degree	3 (industrial environment)				
	Ambient temperature	0 to +50 $^{\circ}$ C +32 to +122 $^{\circ}$F (No dew condensation), Storage: -25 to +65 $^{\circ}$ C -13 to +149 $^{\circ}$F				
	Ambient humidity	35 to 85 % RH, Storage: 35 to 85 % RH				
	EMC	EN 61000-6-2, EN 61000-6-4				
	Voltage withstandability	1,000 V AC for one min. between all supply terminals connected together and enclosure				
	Insulation resistance	20 M Ω , or more, with 500 V DC megger between all supply terminals connected together and enclosure				
	Vibration resistance	10 to 150 Hz frequency, 0.7 mm 0.028 in amplitude in X, Y and Z directions for 80 min.				
Shock resistance		300 m/s ² acceleration (30 G approx.) in X, Y and Z directions for three times each				
Material		Enclosure: Polybutylene terephthalate, Transparent cover: Polycarbonate				
I/O cable		0.09 mm ² 10-core composite cable, 2 m 6.562 ft long				
I/O cable extension		Extension up to total 10 m 32.808 ft is possible, with 0.09 mm ² or more, cable. (Note 6)				
Weight		Net weight: 140 g approx.				

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 $^{\circ}$ C **+68 $^{\circ}$ F**.

2) Switching between current and voltage is accomplished by a switch on the bottom of the controller.

3) These are the temperature characteristics of the linear output when the sensor head is connected.

4) The judgment output and linear output and linear output response time is calculated by (Measuring cycle) $\times$ (Set average sampling rate + 1).

5) The calculation unit is necessary.

6) If the extension cable is longer than 10 m **32.808 ft**, then it will not qualify for CE marking.

Products

PRECAUTIONS FOR PROPER USE

Refer to p.1027 for general precautions and p.1025~ for laser beam.

- This catalog is a guide to select a suitable product. Be sure to read instruction manual attached to the product prior to its use.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

- This product is classified as a Class 1 Laser Product in IEC / JIS regulations and a Class II Laser Product in FDA regulations. Do not look at the laser beam through optical system such as a lens.
- The following label is attached to the product. Handle the product according to the instruction given on the warning label.

(The English warning label based on FDA regulations is pasted on the \ FDA regulations conforming type.)

(The English warning label is packed with the sensor.)

Safety standards for laser beam products

- A laser beam can harm human being's eyes, skin, etc., because of its high energy density. IEC has classified laser products according to the degree of hazard and the stipulated safety requirements. The **HL-T1** series is classified as Class 1 laser. (Refer to p.1025~ for laser beam.)

Safe use of laser products

- For the purpose of preventing users from suffering injuries by laser products, IEC 60825-1: 2001 "Safety of laser products". Kindly check the standards before use. (Refer to P.1025~ for laser beam.)

Connection

- This product is made to satisfy the specifications when the sensor head is combined with the controller. In any other combination, not only may it not satisfy the specifications, but could be the cause of breakdown. So by all means, use it so that there is a combination of the sensor head and the controller.

Others

- This product outputs the judgment of the laser light analog quantity. Since there is variation in the light intensity between the center and the edges of the detection area, and the emitter side and the receiver side, the "display value" does not equal "the actual dimensions", so caution is necessary. Use the displayed dimensional value as a criterion.
- If the object being measured has a mirror surface or is a transparent body, it may be impossible to measure it accurately, so please exercise caution.
- Absolutely do not attempt to disassemble this product.

Functions

Function	Details
Zero reset function	The following tasks can be done by executing zero reset. - The display value can be set at "0". - The linear output when the display reads "0" is made the center output value of the 2 points set by monitor focus. (In the default state, the current output is 12 mA and the voltage output is 0 V.)
Auto scaling function	The auto scaling function selects whether to display the laser beam reception amount in the main-digital display in "mm" units or in "%" units, and determines whether the amount of laser beam received or the amount of laser beam interrupted is displayed. With the set standard laser beam reception amount as the reference value, the current laser beam reception amount (laser beam interrupted amount) is scaled automatically and is displayed as well as being output.
Standard received light setting	This function registers and stores the current laser beam reception amount in memory as the standard laser beam reception amount. The laser beam reception amount during full laser beam entry becomes the 100 % laser beam reception amount's full scale (F.S.). If this function is used, the display and the linear output are set on the full scale (F.S.) automatically. It can also be used to correct the laser beam reception amount when there is a change in the laser beam reception amount due to dirt, etc. on the front glass.
Scaling function	The scaling function is a function that changes the display value to the desired amount with respect to the setting value. At the desired distance, the display value can be input and changed.
Hysteresis width setting function	This function sets the hysteresis to the desired value.
Monitor focus function	With this function, the linear output range and inclination, etc. with respect to the display value can be specified. Setting is done by determining the 2 output values with respect to the desired display values.
Differential function	This function makes the amount of change in the measured value an output value. Use this function when measuring if you are paying attention to changes in measured values, as when counting the number of workpieces, etc.
Display reverse function	The digital display's direction can be selected. The forward direction or the reverse direction to match the direction of installation on the equipment can be selected.
ECO display function	This function makes the display dark and saves electric power.
Display digits limitation function	This determines the number of display digits in the main-digital and sub-digital displays. If the number of digits is limited, the digits are turned off beginning with the lowest order digit.
Zero reset memory function	This selects whether or not to save the zero reset level in memory when the power is turned OFF. If you desire to reproduce the zero reset level from the previous operating session when you turn the power ON again, then enable this function. If this function is enabled, the zero reset level data are written into the EEPROM each time.
Key lock function	The controller's key input can be disabled. Once the key input is disabled, the controller will not accept any key inputs until the key lock is released. Use this function to avoid changing the setting by mistake.

DIMENSIONS (Unit: mm in)The CAD data in the dimensions can be downloaded from the SUNX website: <http://www.sunx.com>**HL-T1001A(F) HL-T1005A(F)****Sensor head**

Notes: 1) IEC / JIS conforming products do not contain light beam shielding plate, or certification / identification label.

2) The receiver of **HL-T1001A(F)** does not incorporate a slit.

DIMENSIONS (Unit: mm in)The CAD data in the dimensions can be downloaded from the SUNX website: <http://www.sunx.com>**MS-HLT1-1**

Sensor head mounting bracket for HL-T1001A(F) / HL-T1005A(F) [Accessory for HL-T1001A(F) / HL-T1005A(F)]

Material: Cold rolled carbon steel (SPCC) (Uni-chrome plated)
Two M3 (length 20 mm 0.787 in) screws with washers are attached.

Assembly dimensions

Mounting drawing with HL-T1005A's receiver

**MS-LA3-1**

Sensor head mounting bracket for HL-T1010A(F) [Accessory for HL-T1010A(F)]

Material: Cold rolled carbon steel (SPCC) (Uni-chrome plated)
Two M3 (length 25 mm 0.984 in) screws with washers are attached.

Assembly dimensions

Mounting drawing with HL-T1010A's receiver

**MS-HLAC1-1**

Controller mounting bracket (Optional)

**CN-HLT1-1**

Sensor head to controller connection cable (Accessory for sensor head)

* The sensor heads that were produced before January 2006 use the connector shown below.
Please note that the new connector and previous connector are incompatible.

DIMENSIONS (Unit: mm in) The CAD data in the dimensions can be downloaded from the SUNX website: <http://www.sunx.com>**HL-T1SV1**Side-view attachment for **HL-T1001A(F)** / **HL-T1005A(F)** (Optional)**Assembly dimensions**Mounting drawing with **HL-T1005A**'s receiver

Material: Polyetherimide (Enclosure), Glass (Front cover)

Two M2 (length 6 mm 0.236 in) screws with washers are attached.

**HL-T1SV2**Side-view attachment for **HL-T1010A(F)** (Optional)**Assembly dimensions**Mounting drawing with **HL-T1010A**'s receiver

Material: Polyetherimide (Enclosure), Glass (Front cover)

Two M2 (length 6 mm 0.236 in) screws with washers are attached.
